

## Use the Cascadia Code font

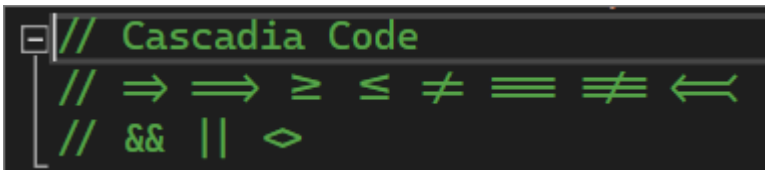

The new **Cascadia Code** font includes **Cascade Mono**, which is the default font in Visual Studio 2022. Not only are both of these fonts easier to read, but the Cascadia Code font also includes coding ligatures that turn a sequence of characters into a glyph. Coding ligatures, or glyphs, make it easier for people to cognitively associate the meaning behind them.

The following screenshot shows an example of the default Cascadia Mono font and lists a series of characters, to include mathematical symbols, that you might find yourself using while you code.

```
// Cascadia Mono
// => ==> >= <= != === !== <=<
// && || <>
```

The following screenshot shows an example of the Cascadia Code font, where the same series of characters shown previously are now converted to coding ligatures, or glyphs.

```
// Cascadia Code
// => ==> >= <= != === !== <=<
// && || <>
```

Notice that the last line of text in the Cascadia Code screenshot shows how the space between duplicate characters is reduced, which also makes them easier to read.

Here's how to toggle between the Cascadia fonts:

1. Go to **Tools > Options > Environment > Fonts and colors**.
2. From the **Font** dropdown list, select either the **Cascadia Code** font or the **Cascadia Mono** font you want, and then select **OK**.
